EDUCATION

University Of California, Irvine (UCI)

Expected Graduation: 2028

Bachelor of Science in Computer Engineering

Irvine, CA

- Relevant Coursework: Data Structures and Algorithms, Software Engineering, Computer Architecture, Discrete Math and Probability, Network Analysis I/II, Physics I/II/III

EXPERIENCE

Software Engineer Intern

May 2026 – Present

ITTIA

- Increased line and function test coverage for the ITTIA DB LITE streaming engine from 77.7% / 80.8% to 90.1% / 96.1% by building reusable automated parameterized tests using **GoogleTest**.
- Traced code reachability through a legacy **C/C++** codebase to distinguish dead code from live functionality, removing confirmed dead code with engineering lead review.
- Extended the stream engine's public API with new setters and getters for 10 previously unsupported non-numeric data types: UTF-8, UTF-16, UTF-32, ANSI, binary, boolean, date, time, timestamp, and datetime.

Hardware/Software R&D Engineer

April 2026 – Present

Hero Lab

- Developing a fetal ECG wearable to monitor fetal health from the womb, alongside a contactless acoustic sensing system for remote ECG reconstruction.
- **fECG**: Diagnosed a bent connector pin and a faulty voltage regulator on a fetal ECG wearable PCB through systematic power-rail testing, restoring board functionality.
- **Remote ECG**: Prototyped an on-device model deployment workflow on a Jetson Orin Nano using NVIDIA's TensorRT Edge-LLM pipeline; diagnosed a hardware-level execution failure and pivoted to an alternate inference pipeline to achieve working on-device deployment.

Project Engineer Intern

June 2025 – July 2025

MathWorks

- Developed classification models in **MATLAB** to recognize movement transitions from walking to running, utilizing wearable sensor data to improve fitness monitoring and injury risk detection.
- Improved activity-segment classification accuracy by ~45% and reduced elevation misclassification accuracy by ~80% by expanding the dataset with uphill, downhill, and flat terrain data.
- Collected and processed **10,000+** seconds of multi-sensor data (acceleration, position) across multi-terrain trials using MATLAB Mobile to build robust training, validation, and test datasets.
- Selected as one of the top 3 winners in the MathWorks Internship 2025 out of 20+ project intern groups.

Project Manager

Jan. 2024 – May 2025

California Solar Regatta

- Directed the design and construction of a solar-powered boat; led Drivetrain and Assembly teams and oversaw the integration of a high-efficiency BLDC motor, 3D-printed mounts, and lithium-powered electrical systems.
- Mentored 6+ team members in CAD (Onshape), circuit wiring, and mechanical assembly; fostered collaboration that helped secure 4th place overall by solving legacy design challenges.

PROJECTS

Single-Cycle RV32I Processor | [github](#)

- Designed and verified 8+ Verilog submodules (ALU, register file, instruction memory, program counter, multiplexers), then integrated them with a controller and ALU controller into a single-cycle RV32I processor.
- Built control logic to decode opcode into control signals and resolve ALU operations from Funct3/Funct7, distinguishing instructions like ADD and SUB.
- Verified correct instruction execution with a custom testbench, passing 20/20 test cases in Vivado simulation.

SKILLS

Languages: C++, C, Python, Java, JavaScript, MATLAB, Verilog

Developer Tools: Git, Gitlab, VS Code, Docker, Vivado
