SUMMARY

Computer Engineering student at UC Irvine with hands-on software engineering experience in C++ systems development, test automation, and ML-driven data pipelines. Proven track record of delivering measurable results in production codebases and competitive internship programs.

EDUCATION

University Of California, Irvine (UCI)

Expected Graduation: 2028

Bachelor of Science in Computer Engineering

Irvine, CA

- Relevant Coursework: Data Structures and Algorithms, Software Engineering, Computer Architecture, Discrete Math and Probability, Network Analysis I/II, Physics I/II/III

EXPERIENCE

Software Engineer Intern

May 2026 – Present

ITTIA

- Increased line and function test coverage for the ITTIA DB LITE streaming engine from 77.7% / 80.8% to 90.1% / 96.1% by building reusable automated parameterized tests using **GoogleTest**.
- Traced code reachability through a legacy **C++** codebase to distinguish dead code from live functionality, removing confirmed dead code with engineering lead review.
- Extended the stream engine's public API with new setters and getters for 10 previously unsupported non-numeric data types: UTF-8, UTF-16, UTF-32, ANSI, binary, boolean, date, time, timestamp, and datetime.

Project Engineer Intern

June 2025 – July 2025

MathWorks

- Developed classification models in MATLAB to recognize movement transitions from walking to running, utilizing wearable sensor data to improve fitness monitoring and injury risk detection.
- Improved activity-segment classification accuracy by ~45% and reduced elevation misclassification accuracy by ~80% by expanding the dataset with uphill, downhill, and flat terrain data.
- Collected and processed **10,000+** seconds of multi-sensor data (acceleration, position) across multi-terrain trials using MATLAB Mobile to build robust training, validation, and test datasets.
- Selected as one of the top 3 winners in the MathWorks Internship 2025 out of 20+ project intern groups.

Computer Science Tutor

August 2024 – May 2025

MESA

- Tutored over **15+** students in C++ and Object Oriented Programming, and helped improved their class performance by an average of one letter grade up.
- Managed and tracked student progress throughout the semester using Google Sheets, recording topics to reinforce in future sessions to strengthen problem-solving skills.

Project Manager

Jan. 2024 – May 2025

California Solar Regatta

- Directed the design and construction of a solar-powered boat; led Drivetrain and Assembly teams and oversaw the integration of a high-efficiency BLDC motor, 3D-printed mounts, and lithium-powered electrical systems.
- Mentored 6+ team members in CAD (Onshape), circuit wiring, and mechanical assembly; fostered collaboration that helped secure 4th place overall by solving legacy design challenges.

PROJECTS

Engineering Portfolio Platform | [website](#)

HTML, CSS

- Built an interactive portfolio hub using **HTML** and **CSS** to publish and showcase engineering projects for 25+ students seeking job opportunities.
- Maintained the website and regularly updated pages to accommodate new projects and event showcasing.

SKILLS

Languages: C/C++, Python, Java, JavaScript, MATLAB, Verilog, HTML, CSS

Developer Tools: Git, Gitlab, Linux, VS Code, Jira, Vivado, Figma

Frameworks/Libraries: React, SQLite
